

San Diego, Calif., May 23, 2005 – Apacheta Corp., a privately held, mobile enterprise software company, announced the appointment of Mr. Peter Clare as Chief Technology Officer.

Since 2000, Peter Clare has been a private investor and active board member for early stage technology companies. After seeing the strategic potential of Apacheta's team and their technology, Peter became an investor and board member in 2004. "Simply stated, Apacheta has one of the best teams I have seen," said Mr. Clare.

Peter now joins Apacheta's team as CTO, working closely with Steve Higgins, Apacheta's VP of engineering. "I want to help Steve and the other members of the team expand and develop the unique mobile architecture already being deployed by Apacheta. I am very excited about Apacheta's deep domain knowledge in mobile solutions, and am impressed with the mobile applications and application development environment Apacheta is already delivering to its customers. Apacheta really is at the forefront of mobile computing, providing the first truly innovative business process and analytics tools, and mobile applications built from these tools. Apacheta's XML-based virtual machine architecture provides an extremely powerful platform for mobile applications," said Mr. Clare.

Peter brings a wealth of knowledge and experience in software architecture having previously been an early Oracle Corporation employee, and a member of the senior management team that helped build Oracle during the ten years of its most rapid growth (1984..1994). Peter led the R&D group at Oracle which invented PL/SQL, Oracle's programmatic language extension to SQL, and left Oracle as Director of Architecture and Education, where he helped guide and disseminate Oracle's core technology throughout its worldwide technical organization.

"Peter's background and knowledge in development environments will help take the Apacheta VisualACE™ development tools and integration tools to the next level. We are very excited to have him join our team and take an active roll in our architecture and toolsets", commented Mr. Higgins, VP of Engineering for Apacheta.

Apacheta currently markets software development solutions and Apacheta-enabled applications in the mobile distribution market ranging from fresh goods delivery to auto transport. Apacheta's unique business process approach to mobile development and deployment make it easy to identify and create individual business processes that a customer can use, for example, to manipulate and customize their delivery process in the field. To help identify and define these business process "tasks", Apacheta provides seamless plug-ins to common development environments from IBM and Microsoft. This allows the mobile application developer to use familiar supported languages and development methodologies and eliminates the need to learn a new and proprietary way to build their application.

"It is this unique architecture that attracted Peter to taking a hands on role in the organization. We are extremely happy with Peter's decision to do so, his enthusiasm, and we welcome his addition to an already stellar team", said John Major, CEO of Apacheta.

About Apacheta Corporation

Apacheta Corporation provides mobile business solutions for package product distribution. The primary offerings of RouteACE™ and ServerACE™, provide for end-to-end automation of the delivery process. Features include, signature capture, invoicing, like least cost routing, wireless support, scanning and RFID, and printing. Fully deployed Apacheta solutions support process tracking through analytics and enable the adjustment of workflow on the handheld device to improve overall efficiencies in the field. The unique mobile workflow engine and task-oriented mobile architecture provide a highly customizable process while maintaining a great degree of stability. Apacheta Corp. has offices throughout the U.S. and is headquartered in San Diego, California. For more information, visit www.apacheta.com
